

THE MILLENNIUM SYSTEM

- *CR Millennium System assumes a 40° walk-in cooler
- *Reduces beer temperature in trunk lines (-8°) to deliver 32° beer at taps
- *Competition's systems simply maintain walk-in temperature to taps
- *Millennium system removes 8 critical degrees of heat from lines without prechilling beer
- *Any MLN can easily upgrade to CR32 if need arises
- *Fully sealed glycol reservoir - no glycol dissipation
- *Maintenance free

- *Available in $\frac{1}{3}$, $\frac{1}{2}$, $\frac{3}{4}$ hp. - carries beer up to 500' away from source
- *Built-in safety features to protect refrigeration compressor
- *As always CR fully engineers each system so customer receives a complete package including installation kit and coordination of installation from factory
- *MLN system delivers less than 5% waste from the kegs
- *Operator will sell every drop of beer from keg
- *NO FOAM, NO WASTE, MORE PROFITS
